Art Unit: 1632

Applicant's arguments filed May 5, 2011 have been fully considered but they are not persuasive. The amendment has been entered. Claims 1, 2, 4-6, 8 and 11-13 are pending. Claims 8 and 11-13 are withdrawn from consideration as to a non-elected invention. Claims 1, 2 and 4-6 are examined herein.

The rejections made under 35 U.S.C. § 102/103 in the office action mailed over Kelly et al and Walcott et al, or 102(b) over Kelly are withdrawn.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2 and 4-6 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Limb et al, Investig. Ophthal. & Visual Sci., 2002, Vol. 43, pp. 864-869 (IDS, filed 11/3/10, Ref. R1) in view of Kelley et al. Invest. Ophthal. Vision Sci., 1995, Vol. 36, pp. 1280-1289 as set forth in the rejection mailed January 5, 1951.

Limb teaches a culture of adult human Muller cells expressing markers EGF-R, glutamine synthetase, CRALBP and α-SMA (page 866, col. 1, parag. 1, lines 2-8). Limb also teaches the culture of adult Muller cells on fibronectin (page 865, col. 1, parag. 3, lines 1-6). The cells were derived from the retina donated by a human adult (page 865, col. 1, parag. 2, lines 4-10). Further the cells described by Limb have the same marker expression pattern as the cells disclosed, indicating for the breadth of the claims, the cells are the same

Art Unit: 1632

Kelly teaches the culture of human fetal retinal cells on Matrigel™ coated tissue culture plates in media containing EGF (page 1282, col. 2, parag. 3, lines 1-6). The retinal cells are described as comprising Muller cells, which would be de-differentiated to a progenitor phenotype. Kelley offers motivation in stating human fetal retinal progenitor cells can be used to identify molecules involved in factors that control retinal neurogenesis. Further, Kelley cultures the retinal cells comprising Muller cells in media comprising retinoic acid where the exhibit the expression of recovering, a protein associated with photoreceptor cells (page 1284, col. 1, parag. 3, lines 1-8 and col. 2, parag. 1, lines 1-5).

Thus at the time of the instant invention, the ordinary artisan would have found it obvious to culture adult Muller cells, as taught by Limb et al under the conditions taught by Kelley et al on matrigel or fibronectin matrix in the presence of EGF to determine the effect of such culture on cell morphology.

Applicant argues Kelly is directed to fetal human retinal progenitors and do not identify Muller cells expressing mature markers. Applicant argues Kelly did not identify the cell population as comprising Muller cells or Muller stem cells, and in fact identified the cells as neurons by staining with NSE. Applicant argues the cells taught by Kelley do not express markers of mature Muller cells. Applicant also argues the cells of Kelley cannot be growth indefinitely... These arguments are not persuasive

While the cells taught by Kelly and those claimed are from different stages of development, fetal vs. adult, there is no evidence the two cell types do not express the same markers, or that Kelly's cell line cannot be expressed indefinitely. Applicant offers

Art Unit: 1632

arguments for such but no evidence in the form of a declaration under 35 U.S.C. §

1.132 or references. Kelly, through the growth of the cell population that contains Muller cells in the presence of EGF, shows the fetal cells at least express the EGFr, which Limb teaches is a marker of mature Muller cells. Thus, while Kelly did not test for the markers stated by applicant, there is no reason to believe the markers are not present, and every reason to believe the EGFr mature Muller cell marker is present. Further, Kelly states the flattened cell in the culture were probably Muller cells and expressed NSE at a much lower level (Kelly, page 1282, col. 1, parag. 1, lines 14-17). Thus, Kelly believed the culture to contain Muller cells. There is no requirement in the claims for the cultures to be any amount of Muller cells. Therefore Kelly is an appropriate reference. Applicant should amend the claims to a purity level and/or add a step for identifying or isolating the dedifferentiated cell. The re-differentiation step would be better served if written independently.

Applicant argues Limb describes a characterization of a spontaneously immortalized Muller cell line. Applicant argues when the article was published, it was not known that the cells of the cell line were stem cells. Applicant argues because Lim did not teach the stem cell nature of cells, one of ordinary skill would have not been motivation combine the teachings of Kelley and Limb et al. publication to reached the claimed invention. These arguments are not persuasive.

Again applicant should carefully read the claims. For example there is no separation of the dedifferentiation step from the re-differentiation step. Both events can be performed simultaneously. Further, the cells taught by Limb are adult Muller cells

Art Unit: 1632

and in view of Kelly when cultured in the presence of EGF would become dedifferentiated cells. There is no requirement in the claims to identify, purify, and substitute media or any step that removes the invention from Kelly and Limb. The ordinary artisan would have been motivated to combine Kelly and Limb to determine the effect as there is no requirement to combine for the same purpose as the invention being examined.

Should applicant wish to discuss the language of the claims, there representative is invited to call at the number given below.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
